# Title

## A beautiful code block

---

```
def f(x):  
    s = ("Test", 2+3, {'a': 'b'}, x) # Comment  
    print(s[0].lower())  
  
class Foo:  
    def __init__(self):  
        byte_string = 'newline:\n also newline:\x0a'  
        self.makeSense(whatever=1)  
  
    def makeSense(self, whatever):  
        self.sense = whatever  
x = len('abc')  
print(f.__doc__)
```
